

The Badlands and Little Missouri River near Medora, North Dakota. The Badlands of North Dakota are a unique part of the state's geographic mosaic and have played a significant role in the ongoing history of America. Badlands are formed by erosion of soft sedimentary rock. The High Badlands are one of the state's most famous attractions. The High Badlands cover a large portion of the state's western half. Theodore Roosevelt National Park is the largest and one of the best Badlands attractions. Photo: American Products Publishing
